

STABLE COMPASS

India's Monetary Intelligence Layer

Turning Every RBI Event Into a Trust-Building Moment

MBA Strategy Competition | Scaler School of Business | Group 05

Aadarsh Uniyal · Adwitiya Yadav · Charles Chacko · Anshul Kashyap · Chiranjeevi Bhoyar

The Strategic Case at a Glance

PROBLEM

MPC decisions cause user inaction - idle cash, missed windows, zero brand recall on announcement day.

SOLUTION

PEAR Framework: Predict → Educate → Act → Retain. Each pillar maps to a specific behavioural failure.

IMPACT

Measurable uplift in conversion, engagement and retention across each 60-day MPC cycle.

PRIORITY

Three initiatives executable before August 3 MPC. Investment: ₹30-65L (<2% of ad budget). Conservative ROI: 1.0x. Base ROI: 3.4x.

India's Fixed Income Market Is at an Inflection Point

₹230Lcr

Total FD market

₹30Lcr

Digitisable TAM (13%)

5.25%

Repo rate - held 3× consecutive

6/year

MPC meetings - predictable
macro events

Four Converging Forces Make This the Right Moment

MACRO TRIGGER

01

Rate cycle is at inflection

RBI cut 125bps across FY25–26. Rates held at 5.25% for 3 meetings. The lock-in narrative carries maximum relevance right now.

BUSINESS TRIGGER

02

Distribution already built

Millions of registered users and 10+ partner banks. PEAR requires no new acquisition investment - only product depth on existing infrastructure.

BEHAVIOURAL TRIGGER

03

Users seek guidance during uncertainty

In a rate-cut environment, investors face real timing decisions. No platform currently fills this advisory role.

COMPETITIVE TRIGGER

04

MPC advisory category is unclaimed

No competitor has built an integrated MPC advisory experience. Stable Money is well positioned to establish an early advantage - but the window is limited.

Monetary Policy Uncertainty Creates Decision Paralysis

Information Gap

Users do not know when MPC meets or what a rate change means for their FD returns. Reddit signal: "Stable Money vs Wintwealth vs TheFixedIncome vs GoldenPi vs GriplInvest" - users compare 5 platforms without any timing guidance.

Choice Overload

10+ banks $\times$ 4 tenures = 120+ options. Decision fatigue causes users to close the app without booking.

Mistiming

Users who act do so without guidance - wrong tenure selection, wrong bank, stale rates.

Idle Cash

A large portion of registered users have never booked. MPC is the activation trigger that is currently absent.

The Problem Has 5 Structural Layers - Each Needs a Different Fix

Stable Money: India's Trust Infrastructure for Fixed Income

Platform

₹5,000 Cr+ AUM

60L+ registered users; 15L+ active (25%)

Median age: 28 | 69-person team | 2,600+ cities

10 partner banks/NBFCs

Revenue

0.30–0.60% commission per FD (₹4.3 Cr operating revenue FY25, 12× YoY growth)

Zero fees to users

AMFI trail (MFs)

Co-branded credit card

Moat

Only platform: FDs + Bonds + MFs + Card

SFB rate advantage 0.5–1.5%

Trust-first brand (CEO: 'Trust compounds')

DICGC insured + SEBI RA registered. \$65.5M raised; \$175M valuation (Pre-Series C, Peak XV)

40% of FDs go to NON-highest-rate products - users optimise for tenure fit and trust, not just headline rates.

Six Biases Drive Every FD Decision - And Every MPC Paralysis

Loss Aversion

Fear of locking in at the wrong rate outweighs desire to earn better returns

FOMO

'Rates might be higher elsewhere' prevents booking even at good rates

Status Quo

Idle cash stays idle. 'I'll check after the MPC' is a decision that never gets made.

Anchoring

8.5% SFB peak is the mental benchmark. 7.2% feels inadequate even if it is excellent.

Choice Overload

120+ FD options cause decision fatigue - users close the app without booking.

Herd Behaviour

'My family does FDs at SBI' overrides better rates available on the platform.

Users Are Most Motivated to Act - And Most Unsupported - Around MPC

Three Distinct Users - Three Different MPC Behaviours

Priya, 27

Software Engineer, Bengaluru

Investment Size

₹50K–2L

Decision Trigger

FOMO + social proof

MPC Behaviour

Googles 'best FD now' after MPC.
Overwhelmed by options. Does not book.

Feature Need

ONE recommended FD with 5-tap booking.
Platform data: ~1.1% of active users book per MPC cycle - Priya represents the 98.9% who do not.

Ramesh, 44

Self-employed CA, Indore

Investment Size

₹5L–15L

Decision Trigger

Reinvestment risk anxiety

MPC Behaviour

Actively seeks to ladder - 1yr + 3yr FDs simultaneously after rate cuts.

Feature Need

FD Laddering Wizard with timeline visualisation. Platform data: ₹5L-15L tickets at 0.45% commission are the highest-value segment per booking.

Sunita, 67

Retired, Nagpur

Investment Size

₹2L–8L

Decision Trigger

Capital preservation

MPC Behaviour

Calls her daughter. 'Should we book before rates fall?' Needs WhatsApp.

Feature Need

WhatsApp summary: plain English, senior rate highlight. Illustrative archetypes based on platform discussion patterns - to be validated with internal cohort data.

Today's Journey: Three Moments Where Stable Money Goes Silent

T-14 DAYS

IGNORANCE

User has no idea MPC is approaching.
Money sits in savings earning 3.5% when
FDs offer 7.25%+.

T+0 HOURS

INACTION

User sees RBI news. Opens the bank app
- not Stable Money. Closes without
booking.

T+7 DAYS

MISTIMING

User finally acts. Books the wrong tenure
at a bank with a stale rate. Leaves value
behind.

Every MPC Outcome Creates Different User Behaviour - PEAR Adapts to All Three

MPC Outcome	User Emotion	Typical User Behaviour	Stable Money Response
RATE CUT 	Fear of missing higher rates if they wait longer	Rush to lock in before FD rates fall further	Urgency messaging - 'window closes in ~15 days.' Single recommended FD with rate lock timer.
RATE HOLD 	Confusion - 'should I wait for a cut, or book now?'	Delay and defer. Status quo bias dominates.	Education + reassurance - 'rates are stable. Current rates are attractive. Here is why now is a good time.'
RATE HIKE 	FOMO and optimism - 'rates might go even higher'	Wait for even higher rates. Delay booking.	FD Laddering guidance - 'book short tenure now, reinvest at potentially higher rates. Do not wait for the peak.'

PEAR is scenario-agnostic. The framework adapts to every MPC outcome. Strategic hedge: if MPC activation proves insufficient, PEAR infrastructure (push, rec engine, cards) pivots to life-event triggers (salary credit, bonus, tax deadline) - same system, different trigger.

Four Opportunities - Ranked by Impact and Feasibility

THE PEAR FRAMEWORK

Predict · Educate · Act · Retain

PREDICT

Own the 14 days before RBI meets.
MPC countdown + market consensus.

EDUCATE

Plain-English translation within 30 min.
'What this means for YOUR FDs.'

ACT

One recommended FD. 5-tap booking.
Personalised to user goal and tenure.

RETAIN

Rate tracker + maturity alignment.
Keep users engaged between cycles.

From FD Aggregator to Monetary Intelligence Layer

TODAY

- FD aggregator with rate comparison
- Transactional - users come, book, leave
- No MPC presence
- Product-led, not advice-led

STABLE COMPASS

- India's monetary intelligence layer
- Advisory relationship across every MPC cycle
- First app users open after RBI announces
- Trusted advisor for crores of Indian savers

WHY STABLE MONEY?

Because trust compounds. Every RBI decision should create confidence, not confusion.

PEAR Maps Directly to 9 Product Features - 4 Ship Before August MPC

Be the First Place Users Understand What RBI Just Decided

LIVE • RBI JUST
ANNOUNCED

RBI Cut Rates by 0.25%

- FD rates at most banks will fall ~25–30bps in 2–3 weeks
- On ₹1L invested, that's ₹250 less per year if you wait
- Best booking window: Next 15 days before banks update

[See Your Recommended FD →](#)

AI Plain-English Translator

LLM wraps deterministic rate-impact numbers in plain language. Reviewed for accuracy. Published in <30 min.

Rate Impact in Rupees

Not '25bps.' Always: '₹250 less per year on ₹1L.' Converts abstract to personal.

WhatsApp Summary

Same card delivered via WhatsApp to senior and Tier 3 users. Open rates materially higher than push notifications.

One Recommendation. Five Taps. Done - No Choice Overload

For Priya | Goal: Emergency Fund | Available: ₹50,000

Unity Small Finance Bank

7.50% p.a. · 12 months · DICGC Insured

Why this FD for you: Matches your 1-year goal. Rate locks before expected cut. ₹3,750 interest guaranteed.

 Rate valid ~12 more days

Book This FD →

Personalisation Engine

User goal + tenure history + idle balance → single ranked recommendation. No filter browsing.

Rate Lock Timer

'Valid 12 more days' creates urgency without pressure. Time-bounded, factual.

One-Tap Booking

Pre-filled with user KYC. UPI confirmation only step. 5 taps from notification to booked.

Retain Activates the PEAR Flywheel - Every Cycle Compounds

Each retained user returns to Predict with higher intent. Trust compounds. Every MPC cycle makes the next one more valuable.

The 60-Day MPC Cycle: An Operational Playbook That Repeats Every Cycle

T-14 to T-3

PREPARE

- MPC Countdown Widget activates on home screen
- Market consensus aggregated from analyst reports
- Pre-MPC email brief drafted (3 bullets, mobile-first)
- Recommendation engine pre-computes top FDs per user segment

Owner: Product + Data team
Automation: 90% (calendar-triggered)

T-3 to T+0

ACTIVATE

- Pre-MPC email sent (T-3)
- Decision Card template prepared for 3 scenarios (cut/hold/hike)
- Push notification copy pre-approved for each scenario
- Ops team on standby for T+0 (30-min publish SLA)

Owner: Ops + Content team
Automation: 60% (human review required)

T+0 to T+7

CONVERT

- Decision Card published within 30 min of RBI announcement
- Segmented push sent to active user base
- Personalised rec page activated with rate-lock timer
- Support team briefed on expected question patterns

Owner: Full team (war room)
Automation: 70% (scenario-triggered)

T+8 to T+60

RETAIN + LEARN

- Rate Transmission Tracker: monitor which banks updated rates
- Extend booking window messaging (T+8 to T+21)
- FD maturity alerts linked to next MPC date
- Cycle retrospective: what worked, what didn't
- Update recommendation model with cycle data

Owner: Product + Analytics
Automation: 80%

AI Enables Personalisation - But Never Replaces the Trust Guardrails

Priority	Feature	Effort	Impact	Note
P0	Plain-English RBI Card	LOW	HIGH	LLM wraps deterministic numbers. Publishable in 30 min.
P0	Smart Segmented Push	LOW	HIGH	Segmentation logic + personalised copy. Materially higher open rate.
P0	Recommendation Engine	MED	HIGH	Rule-based + ML ranking on user profile.
P1	Rate Transmission Tracker	MED	MED	Partner bank rate feed monitoring.
P1	FD Laddering Wizard	MED	HIGH	Financial planning algo. ₹3L+ ticket.
P2	AI Advisor (Ask Stable)	HIGH	MED	LLM + guardrails + SEBI RA compliance.

AI Rule: Rate numbers computed by deterministic engine. LLM handles language only. All outputs carry SEBI RA disclosure. No individual portfolio allocation advice.

Five Screens. Five Moments. Each Removing One Barrier to Investment.

Distribution / Reach	✓ Growing	✓ Niche	✓✓ Large	✓✓ Large	✓✓ Largest

✓✓ Strong ✓ Partial ~ Basic X Absent

Stable Money is well positioned to establish an early advantage in MPC advisory - a category no competitor has claimed.

Why This Advantage Is Difficult to Replicate Quickly

FD-Intent User Base

01

Millions of registered users have demonstrated intent by completing KYC and browsing FD options. This pre-qualified base takes years to build.

Trust-First Brand Positioning

02

Stable Money has earned user trust over 3+ years with ₹5,000 Cr+ AUM and no reported principal losses. Trust is not replicable through product copying.

Multi-Bank Partner Ecosystem

03

10+ SFB and NBFC partnerships with preferential rate access. Building these relationships requires regulatory compliance, legal agreements, and operational track record.

Historical Deposit Behaviour Data

04

3+ years of data on user tenure preferences, maturity patterns, and reinvestment behaviour. This data is the foundation of the personalisation engine - it does not exist at a new entrant.

Rate Transmission Visibility

05

Real-time rate feed from 10+ partners enables accurate post-MPC guidance. Building and integrating this feed requires operational partnerships and API agreements.

Existing Customer Relationships

06

Users who have already booked FDs through the platform have an established relationship. Re-engaging them is substantially cheaper than acquiring new users.

Revenue Funnel: Real Numbers, Real Math, Per MPC Cycle

CURRENT BASELINE (FY25)

₹4.3 Cr operating revenue | 60L registered, 15L active (25%) | ~₹956 Cr deposits facilitated | ~1.1% booking rate per cycle | 69 employees

CONSERVATIVE (Pilot - Months 1-3)

15L active users pushed	Platform data
× 15% open rate	Target (industry: 12-18%)
= 2.25L see Decision Card	
× 8% CTR to rec page	Target
= 18,000 reach rec page	
× 10% booking conversion	Target (current ~1.1%/cycle overall)
= 1,800 incremental FDs/cycle	
× ₹1L avg ticket × 0.45%	Derived from FY25 revenue
= ₹8.1L per cycle	
× 6 cycles/year	
= ₹48.6L/year (₹0.49 Cr)	11% revenue uplift on ₹4.3 Cr

BASE (Scale - Months 4-6, with repeat)

15L active × 18% open	Improved with personalisation
= 2.7L see card	
× 10% CTR	Higher with personalised copy
= 27,000 reach rec page	
× 12% conversion	Rec engine + urgency timer
= 3,240 FDs/cycle	
× ₹1.5L avg (laddering lifts)	₹3L+ segment pulls avg up
× 0.45% commission	
= ₹21.9L per cycle	
× 1.3 repeat factor × 6 cycles	40% of Cycle 1 bookers return
= ₹170.6L/year (₹1.71 Cr)	40% revenue uplift on ₹4.3 Cr

Three Phases - Each with Progressively Higher Impact

PILOT

Months 1–3 - Early adoption

Conversion uplift

+10–15%

vs baseline booking rate

Engagement uplift

+10–15%

MPC announcement week

Retention

+1–2pp

annual cohort improvement

Revenue impact

~1.1× baseline

commission per cycle

Primary KPI: Push open rate >15%. Baseline booking rate: ~1.1%/cycle. Target: 1.2-1.3%.

SCALE

Months 4–6 - Habit formation

Conversion uplift

+20–30%

vs baseline booking rate

Engagement uplift

+20–30%

MPC announcement week

Retention

+3–4pp

annual cohort improvement

Revenue impact

~1.3× baseline

commission per cycle

Primary KPI: Booking rate 2× pilot. Target: 1.5-2% of active per cycle. Incremental: ~₹1.7 Cr/yr.

LEADERSHIP

Months 7–12 - Advisory positioning

Conversion uplift

+35–40%

vs baseline booking rate

Engagement uplift

+35–45%

MPC announcement week

Retention

+5–7pp

annual cohort improvement

Revenue impact

~1.5× baseline

commission per cycle

Primary KPI: Repeat booking rate >40%. At scale: PEAR could add ₹2-3 Cr/yr incremental to ₹4.3 Cr base.

All uplifts are relative to FY25 baseline: ₹4.3 Cr operating revenue, ~1.1% booking rate per cycle, 15L active users. Gate Phase 2 on Cycle 1 actuals, not estimates.

How Success Will Be Measured - Across Five KPI Buckets

KPI Bucket	Key Metrics	Leading Indicator	Lagging Indicator
AWARENESS	MPC email open rate Push notification open rate App opens on MPC day (vs non-MPC)	Push opt-in rate	Awareness lift survey
ENGAGEMENT	Session frequency in MPC week Decision card click-through rate Time spent on recommendation page	Decision card CTR	MPC-week sessions vs baseline
CONVERSION	FD booking conversion rate (MPC week) Average deposit size per booking First-time investor activation rate	Rec page CTR	FDs booked / MPC cycle
RETENTION	Repeat FD booking rate across cycles FD reinvestment rate at maturity MPC-to-MPC returning user rate	Maturity alert open rate	Repeat booking rate
TRUST	Net Promoter Score (NPS) post-MPC User satisfaction score (CSAT) Complaint and escalation rate	Post-booking satisfaction	NPS delta vs baseline

Go-To-Market: Reach Users at the Right Moment in the MPC Cycle

PHASE 1: IN-APP

Month 1-2

Audience: 60L+ registered; 15L+ active

MPC T-14: Countdown widget activates

MPC T-3: Pre-MPC email brief (3 bullets)

MPC T+0: Segmented push + Decision Card

MPC T+1-7: Rec page with rate-lock timer

Cost: Zero incremental CAC

Gate: Push open rate >15%

Gate: Decision Card CTR >8%

PHASE 2: MPC-DAY REACH

Month 3-4

Audience: Users searching during MPC week

Partner 2-3 YouTube creators for MPC explainer series (publish T+0)

Quora: official answer to 'What does RBI rate cut mean for FDs?'

Reddit: engage on MPC-specific threads in r/personalfinanceindia

SEO: rank for 'best FD after rate cut'

Cost: ₹2-5L per MPC cycle

Gate: Organic referral >5% of MPC bookings

PHASE 3: EXPAND CHANNELS

Month 5-6

Audience: Offline-adjacent + WhatsApp-first users

WhatsApp BSP: MPC summary card within 1 hr of announcement

Senior-optimised: plain English, large text, one CTA

FD maturity re-booking alerts via WhatsApp

A/B test: WhatsApp vs push vs email for each user cohort

Cost: ₹5-10L per quarter

Gate: WhatsApp booking rate >2× push

Three Phases - Each with a Gate KPI Before Proceeding

Phase 1 · Months 1–3

FOUNDATION

- MPC Countdown Widget
- Live RBI Decision Card
- Plain-English AI Translator
- Smart Segmented Push

Gate KPI: Push open rate >15% in first 2 MPC cycles

Phase 2 · Months 4–6

SCALE

- Personalised Rec. Page
- Rate Transmission Tracker
- FD Laddering Wizard
- WhatsApp MPC Summaries

Gate KPI: Booking rate 2× Phase 1 baseline

Phase 3 · Months 7–12

INTELLIGENCE

- AI Advisor (Ask Stable)
- Deposit Timing Score
- Portfolio MPC Impact
- Offline agent training

Gate KPI: Repeat booking rate >40% of active users

Five Risks Identified - Each Has a Specific Mitigation

Risk	Prob.	Impact	Mitigation
Regulatory (RA vs RIA)	MED	HIGH	Frame as 'platform view.' SEBI RA disclosure on every screen. No portfolio allocation advice.
AI Hallucination	LOW	HIGH	LLM handles language only. Rate numbers from deterministic engine. Human review for 6 cycles.
Notification Fatigue	HIGH	MED	Max 3 MPC pushes/cycle. Preference centre at onboarding. Auto-suppress after 3 no-opens.
Partner Bank Trust	LOW	VERY HIGH	DICGC ₹5L cover on every screen. 5+ bank diversification in recommendation.
Competitor Response	HIGH	LOW	First-mover in MPC advisory. Tata Neu entering FD space with massive brand trust. If MPC-week uplift <5%: pivot PEAR to life-event triggers - sunk cost is ~₹30-65L (vs ₹25 Cr annual ad spend), fully recoverable.

Five Recommendations - Sequenced by Impact and Urgency

01

Ship PEAR Core before August MPC

Decision Card + Smart Push + Recommendation Page. Investment: ₹30-65L. Conservative return: ₹49L/yr (11% uplift). Base return: ₹1.71 Cr/yr (40% uplift) on ₹4.3 Cr revenue base.

Immediate

02

Add regulatory compliance layer

SEBI RA disclosure on every AI output. Consent checkpoint. Protects customer trust and platform credibility.

Immediate

03

Launch WhatsApp MPC channel

Reach the inactive registered base. Apply for BSP in Week 1 - 6-week approval cycle.

Month 6

04

Build FD Laddering Wizard

₹3L+ segment. Higher average ticket size and stronger customer lifetime value. Proprietary capability.

Month 5

05

Instrument everything from Day 1

A/B test P0. Define gate KPIs before committing to Phase 2 investment.

Month 1

IF STABLE MONEY CAN DO ONLY THREE THINGS

Build These. Before August 3.

1

Live RBI Decision Card

WHY:

Own T+0. The two hours after RBI announces are the highest-intent window in any FD investor's year. The platform that is present at T+0 builds a durable recall habit.

BUILD:

LOW ENGINEERING COMPLEXITY

Can be implemented rapidly using existing infrastructure.

2

Smart Segmented Push

WHY:

The Decision Card is worthless if users do not see it. Segmented push is the delivery system - without it, all downstream features are wasted.

BUILD:

LOW ENGINEERING COMPLEXITY

Can be implemented rapidly using existing infrastructure.

3

Personalised Rec. Page

WHY:

Push brings users to the app. This page converts them. Without it: high click-through rate, low booking conversion, user frustration.

BUILD:

MEDIUM ENGINEERING COMPLEXITY

Requires recommendation logic and UI integration.

STABLE COMPASS

Every MPC Event. One Platform. Unlimited Trust.

Stable Money doesn't sell deposits.

It sells confidence - one RBI decision at a time.

Thank you.

Data Foundation: What We Know, What We Assumed, What We Need

VERIFIED

- ₹230L Cr total FD market
- ₹30L Cr digitisable TAM (13%)
- Repo rate 5.25%, held 3 consecutive
- 60L+ registered; 15L+ active (25%)
- ₹5,000 Cr+ AUM
- 10+ partner banks/NBFCs
- ₹4.3 Cr operating revenue (FY25)
- 0.30-0.60% commission per FD
- ~1.1% booking rate per cycle
- 69 employees; \$65.5M raised
- \$175M valuation (Pre-Series C)
- FY25 ad spend: ₹25.3 Cr
- 40% FDs → non-highest-rate
- 6 MPC meetings per year

ASSUMED

- MPC events drive user behavior change
- Push open rate achievable >15%
- 15-day booking window post-MPC
- Conversion uplifts (+10-40%)
- 5-tap booking is technically feasible
- Users form MPC-cycle habits
- Eng. capacity exists for Aug 3 PO
- WhatsApp BSP approval in 6 weeks
- Rate tracker buildable with bank APIs

NEEDED FOR FINANCIAL MODEL

- MPC-week vs non-MPC app opens (validates core assumption)
- Average FD ticket size by cohort
- Push notification open rate baseline
- Rate transmission lag from banks
- Current CAC and LTV by channel
- Idle cash in never-booked accounts
- Cohort-level retention curves
- MPC-week search volume (Google Trends)
